

MyCoast Maryland

MyCoast: Maryland is an app and website that uses photos to help track flooding caused by rain, storms, and other coastal events like high tides. The photos generate beneficial flooding data that would not exist without YOU collecting the information. It provides an easy way to show how flood waters, whether from the rain or tide, are impacting your community.

How to Use It:

Download
the app

Notice, a
flood event?
Take a
picture!

Select the
type of
flooding.

Submit a
report,
through
the app!

You can also use the app for:

Daily tide
schedules

&

Nearby tidal
gauges
